Open Science - Concept, Practices and Challenges

Prof. Dr. Konrad Förstner | ZB MED, TH Köln

In recent years, the concept of Open Science has gained significant momentum, transforming the traditional research landscape and revolutionizing the way knowledge is created, shared, and utilized. Open Science embodies a set of principles and practices that emphasize transparency, accessibility, reproducibility, and collaboration in the scientific process. This talk aims to explore the multifaceted aspects of Open Science and its potential to accelerate scientific discovery, foster innovation, and address societal challenges.

After the lecture, we invite you to a pleasant get-together with drinks and nibbles in the foyer of the biology building.
